Commercial Cyclone Common Vent Option

The popular Cyclone line of commercial condensing water heaters can now be common vented with up to three water heaters. This new vent flexibility is achieved using easy to install kits and is available for both PVC and Polypropylene vent.

Some key features and attributes of the common vent system include:

- Allows three water heaters to be common vented with sidewall termination
- Can reduce the number of wall penetrations, reducing overall installation time
- One kit for each water heater vented with PVC is required
 - o 100227396 120 – 250 PVC
 - o 100223775 300 – 500 PVC
- One kit for each water heater vented with Polypropylene is required
 - o 100227395 120 – 250 Poly
 - o 100223774 300 – 500 Poly
- Kits include vent adapter/backflow preventer and intake adapter. Other standard vent materials field supplied.
- Maximum equivalent vent run 50 feet
- Direct vent configuration only
- Maximum three water heaters can be common vented

The specification sheet and installation manual for these new kits are available online at www.hotwater.com. Please reference the installation manual for complete details.
